

Deep Sagar Karay

DevOps Engineer | Site Reliability Engineer

Mobile: +918522011851 | Email: karaydeepsagar@gmail.com | Web: [linkedin.com/in/karaydeepsagar](https://www.linkedin.com/in/karaydeepsagar)

PROFILE SUMMARY

Senior Cloud DevOps Engineer with 5+ years of experience designing, automating, and operating scalable cloud infrastructure on AWS and Azure for AT&T (Amdocs) and American National Bank of Texas (Tietoevry). Core expertise in Infrastructure as Code (Terraform, Ansible), CI/CD pipeline engineering (Azure DevOps, Jenkins, GitHub Actions, Bitbucket), and Kubernetes cluster management (EKS, AKS) — achieving 99.9% uptime SLAs, 40% reduction in provisioning effort, and 25% cloud cost savings across engagements.

On AWS, hands-on with EC2, EKS, S3, VPC, IAM, ELB, Auto Scaling, ECR, CloudWatch, and Route 53 for building multi-region, high-availability production architectures. On Azure, experienced with AKS, Virtual Machines, VNets, Load Balancers, Azure DevOps, Azure Key Vault, Azure Monitor, and Log Analytics for enterprise-grade infrastructure delivery.

Skilled in building end-to-end observability stacks (Prometheus, Grafana, Datadog, ELK), secrets management (Azure Key Vault, HashiCorp Vault), and DevSecOps practices (RBAC, NSG, image scanning). Currently expanding into GitOps (ArgoCD), Platform Engineering, and AIOps-driven monitoring.

TECHNICAL SKILLS

• Cloud Platform's	: AWS, Azure, GCP
• Scripting Languages	: BASH Scripting, Python
• CI/CD & Versioning tools	: Azure DevOps, Jenkins, GitHub Actions, Bitbucket
• Infrastructure as Code	: Terraform, AWS Cloud formation, Azure ARM
• Containerization Tool	: Docker, Kubernetes, Packer, Microservices
• DevOps Practices	: CI/CD Automations, GitOps, ArgoCD, DevSecOps, Project Management
• Web host Applications	: Apache Tomcat, Nginx
• Monitoring Tools	: Prometheus - Grafana, AWS cloud watch, ELK stack & Datadog
• Operating Systems	: Red Hat, Ubuntu, CentOS, Window Server 2016, Mac OS

CERTIFICATIONS

Certified in AWS Solution Architect Associate (SSA-CO3)	2024 – 2027
Certified in Azure Fundamentals (AZ-900)	2023 – 2024

WORK EXPERIENCE

TIETOEVRY – DevOps Consultant	Dec 2024–June 2026
Client Project – ANBTX (American National Bank of Texas)	

CI/CD & Pipeline Management:

Managed and optimized Bitbucket CI/CD pipelines for 8+ production deployment workflows covering Salesforce, MuleSoft API, DBT, and ETL releases — ensuring zero-downtime deployments across dev, staging, and production environments. Triaged, debugged, and resolved pipeline failures for MuleSoft API and ETL job deployments, reducing mean build failure resolution time by ~35%. Enforced branching strategies (GitFlow) and merge request standards across development teams, improving code integration stability and reducing deployment conflicts.

Project & Release Management:

Directed the end-to-end release lifecycle and governed critical delivery documentation—including deployment plans, release notes, and rollback runbooks—to guarantee 100% audit readiness under strict banking compliance standards. Led cross-functional collaboration between MuleSoft development and operations teams to align technical workflows and standardize environment-specific configurations. Successfully mitigated project risk and optimized delivery quality, slashing environment-related deployment failures in staging by 50%.

API Deployment & Observability:

Deployed and version-controlled MuleSoft APIs via Anypoint Platform, maintaining API uptime and enforcing rollback procedures for failed releases.

Configured and maintained Datadog dashboards to monitor API performance metrics — latency, error rate, retry logic, and throughput — enabling proactive SLA management for banking-critical APIs.

Set up Datadog alerting thresholds for P1/P2 incidents, reducing API incident detection time by approximately 40%.

Tools & Platform:

Bitbucket Pipelines, MuleSoft Anypoint Platform, Datadog, Jira, Confluence, Salesforce, ETL tools, Postman, Webex

AMDOCS (Pay Role: NITYO Infotech) – Cloud SRE & DevOps Engineer

| Feb 2023 – Sep 2024

Client Project – AT&T (CRÈME and MDNCN Applications)

Infrastructure as Code & Provisioning:

Designed and automated Azure infrastructure provisioning using Terraform, building reusable modules for Virtual Machines, VNets, Load Balancers, and Storage Accounts — reducing manual provisioning effort by 40% and cutting infrastructure costs by 25%. Built and maintained environment-specific Terraform workspaces (dev, staging, prod) with remote state management, enabling consistent, repeatable infrastructure across 3 environments for AT&T's enterprise applications.

Integrated Terraform and Ansible into Azure DevOps (ADO) pipelines, enabling fully automated end-to-end infrastructure and configuration deployment — eliminating manual handoffs between infra and app teams.

CI/CD & Configuration Management:

Engineered Azure DevOps YAML pipelines for 10+ application components across CRÈME and MDNCN applications, automating build, test, and deployment stages with quality gates. Developed Ansible playbooks for OS patching, user management, SSH key rotation, and compliance enforcement across 100+ Azure VMs - reducing configuration drift incidents to near zero.

Implemented blue-green deployment strategy for critical AT&T services, achieving zero-downtime releases.

Security & Secrets Management:

Integrated Azure Key Vault with Terraform and Ansible pipelines for dynamic secrets injection — eliminating hardcoded credentials across all deployment scripts and achieving zero secret exposure incidents. SLA, SLO, SLI criteria maintain for app flow. Applied RBAC policies and network security group (NSG) rules across Azure resources, enforcing least-privilege access aligned with AT&T security standards. Configured Azure Monitor and Log Analytics workspaces for centralized logging and alerting across VM fleets, databases, and network traffic — reducing MTTR for infrastructure incidents by ~30%.

Built custom alert rules for CPU, memory, disk, and network anomalies, enabling proactive incident response before user impact.

Tools & Platform:

Azure Cloud, Azure DevOps, Terraform, Ansible, Azure Key Vault, Azure Monitor, Log Analytics, YAML Pipelines, PowerShell, Bash.

TECH PRIMO SOLUTIONS - DevOps Specialist

| March 2022 – Oct 2022

Client Project – FINONE Technologies (MUVIN e-Banking Application)

CI/CD Pipeline Engineering:

Designed and maintained end-to-end Jenkins CI/CD pipelines for MUVIN e-banking application, automating build, test, and deployment stages across Dev, QA, and Production environments - reducing manual deployment effort by ~50% and cutting release cycle time from days to hours. Implemented pipeline-level quality gates including automated unit test execution, code validation, and artifact versioning, improving deployment success rate to 95%+.

Containerization & Configuration Management:

Containerized MUVIN e-banking application components using Docker, eliminating environment inconsistency issues between Dev, QA, and Production — reducing environment-related deployment failures by ~60%.

Managed Kubernetes deployment manifests (YAML) for application workloads and services, optimizing pod resource allocation and ensuring high availability of banking-critical services.

Infrastructure & Security:

Provisioned and configured secure AWS cloud infrastructure (EC2, S3, VPC) based on architectural blueprints, supporting MUVIN e-banking application hosting requirements.

Configured and managed OpenVPN user authentication and access controls, securing remote connectivity for distributed development and operations teams.

Monitoring & Incident Management:

Implemented infrastructure monitoring and alerting using New Relic, configuring dashboards and threshold-based alerts for application performance, server health, and error rates - enabling proactive failure detection before user impact.

Maintained deployment runbooks and incident response documentation, reducing average incident resolution time by ~35%.

Tools & Platform:

Jenkins, Terraform, Ansible, Docker, Kubernetes, OpenVPN, New Relic, AWS (EC2, S3, VPC), Git, CI/CD Pipelines, Jira, Nexus, JFrog Artifactory, Linux

C360 SOFTWARE – AWS DevOps Engineer

| July 2021 – Feb 2022

Client Project – HITACHI (Rean Cloud Platform)

Infrastructure Provisioning & High Availability:

Provisioned core AWS core services (EC2, EBS, S3, VPC, Subnets) using Terraform templates to support development, testing, and database teams.

Configured Elastic Load Balancers (ELB) and Auto Scaling Groups (ASG) to distribute traffic load and ensure high availability for critical applications.

Managed regular EBS volume backups and restoration processes, securing data integrity across database environments.

CI/CD Automation & Environment Support:

Created and maintained Jenkins CI/CD pipelines to automate routine infrastructure deployments, application releases, and repetitive operational tasks.

Managed artifact storage by archiving Jenkins build builds and Docker images securely within AWS ECR and S3 repositories.

Supported developers and DBAs by delivery tailored, isolated infrastructure environments to meet project-specific planning and testing needs.

Tools & Platform:

AWS (EC2, S3, EBS, ELB, ASG, VPC, Route Tables), Terraform, Jenkins, Docker, AWS ECR, Ansible, Packer, Git, Linux

SNEHA ENTERPRISES - DevOps Engineer

| Sep 2020 – May 2021

Client Project– INFOWARE Solutions (Enterprise Web Application Support)

Environment Provisioning & Automation:

Developed lightweight automation scripts using Shell and Ansible to accelerate environment provisioning for test and UAT pipelines.

Assisted in migrating legacy infrastructure configurations from manual setups to version-controlled templates using basic Terraform modules for EC2, S3, and VPC.

Technical Support & Operations:

Configured and managed pre-production cloud environments to ensure deployment readiness for globally distributed QA and development teams.

Provided Level 1 and Level 2 technical infrastructure support, resolving deployment blockers via detailed log analysis and application restart/redeploy operations.

Tools & Platform:

AWS (EC2, S3, VPC), Jenkins, Git, Shell Scripting, Ansible, CloudWatch, Linux, Basic Terraform Modules, Nexus and Jfrog Artifactory

DIGITAL LYNC – [Internship] AWS & DevOps Engineer

| Jan 2020–June2020

Project – Java Web App Deployment & CI/CD Operations

CI/CD & Containerization Operations:

Set up and maintained continuous integration pipelines using Jenkins to execute automated builds, testing, and deployments in a simulated lab environment. Containerized Java web applications using Docker, building custom images and deploying containers for functional verification testing.

Cloud Infrastructure Foundations:

Explored core AWS infrastructure components (EC2, S3, IAM) with a strict focus on basic deployment workflows and access security configurations. Applied best practices for version control and code integration via GitHub, ensuring stable testing cycles for continuous code updates.

Tools & Platform:

AWS (EC2, S3, IAM), Jenkins, Git, Docker, Linux, Bash, Basic HTML/CSS for Web UI, GitHub, Java (WAR file deployment)
