

Deep Sagar Karay

Cloud Architect | DevOps Engineer

Mobile: +918522011851 | Email: karaydeepsagar@gmail.com | Web: linkedin.com/in/karaydeepsagar

PROFILE SUMMARY

Senior Cloud DevOps Engineer with 5+ years of experience designing, automating, and operating scalable cloud infrastructure on AWS and Azure for AT&T (Amdocs) and American National Bank of Texas (Tietoevry). Core expertise in Infrastructure as Code (Terraform, Ansible), CI/CD pipeline engineering (Azure DevOps, Jenkins, GitHub Actions, Bitbucket), and Kubernetes cluster management (EKS, AKS) — achieving 99.9% uptime SLAs, 40% reduction in provisioning effort, and 25% cloud cost savings across engagements.

On AWS, hands-on with EC2, EKS, S3, VPC, IAM, ELB, Auto Scaling, ECR, CloudWatch, and Route 53 for building multi-region, high-availability production architectures. On Azure, experienced with AKS, Virtual Machines, VNETs, Load Balancers, Azure DevOps, Azure Key Vault, Azure Monitor, and Log Analytics for enterprise-grade infrastructure delivery.

Skilled in building end-to-end observability stacks (Prometheus, Grafana, Datadog, ELK), secrets management (Azure Key Vault, HashiCorp Vault), and DevSecOps practices (RBAC, NSG, image scanning). Currently expanding into GitOps (ArgoCD), Platform Engineering, and AIOps-driven monitoring.

TECHNICAL SKILLS

• Cloud Platform's	: AWS, Azure, GCP
• Scripting Languages	: BASH Scripting, Python
• CI/CD & Versioning tools	: Azure DevOps, Jenkins, GitHub Actions, Bitbucket
• Infrastructure as Code	: Terraform, AWS Cloud formation, Azure ARM
• Containerization Tool	: Docker, Kubernetes, Packer
• DevOps Practices	: CI/CD Automations, GitOps, Microservices, ArgoCD, DevSecOps
• Web host Applications	: Apache Tomcat, Nginx
• Monitoring Tools	: Prometheus - Grafana, AWS cloud watch, ELK stack & Datadog
• Operating Systems	: Red Hat, Ubuntu, CentOS, Window Server 2016, Mac OS

CERTIFICATIONS

Certified in AWS Solution Architect Associate (**SSA-C03**) | 2024 – 2027.

Certified in Azure Fundamentals (**AZ-900**) | 2023 – 2024.

WORK EXPERIENCE

TIETOEVRY–DevOps Consultant

Client Project – ANBTX (American National Bank of Texas)

Dec 2024–Present

CI/CD & Pipeline Management:

Managed and optimized Bitbucket CI/CD pipelines for 8+ production deployment workflows covering Salesforce, MuleSoft API, DBT, and ETL releases — ensuring zero-downtime deployments across dev, staging, and production environments. Triaged, debugged, and resolved pipeline failures for MuleSoft API and ETL job deployments, reducing mean build failure resolution time by ~35%. Enforced branching strategies (GitFlow) and merge request standards across development teams, improving code integration stability and reducing deployment conflicts.

API Deployment & Observability:

Deployed and version-controlled MuleSoft APIs via Anypoint Platform, maintaining API uptime and enforcing rollback procedures for failed releases. Configured and maintained Datadog dashboards to monitor API performance metrics — latency, error rate, retry logic, and throughput — enabling proactive SLA management for banking-critical APIs. Set up Datadog alerting thresholds for P1/P2 incidents, reducing API incident detection time by approximately 40%.

Release Management & Documentation:

Authored and maintained deployment plans, release notes, and rollback runbooks in Confluence for every major release cycle, ensuring full auditability required by banking compliance standards.

Collaborated with MuleSoft developers to define and implement environment-specific deployment configurations, reducing environment-related failures in staging by 50%.

Tools & Platform:

Bitbucket Pipelines, MuleSoft Anypoint Platform, Datadog, Jira, Confluence, Salesforce, ETL tools, Postman, Webex

AMDOCS (Pay Role: NITYO Infotech) – Cloud DevOps Engineer

| Feb 2023 – Sep 2024

Client Project – AT&T (CRÈME and MDNCN Applications)

Infrastructure as Code & Provisioning:

Designed and automated Azure infrastructure provisioning using Terraform, building reusable modules for Virtual Machines, VNets, Load Balancers, and Storage Accounts — reducing manual provisioning effort by 40% and cutting infrastructure costs by 25%. Built and maintained environment-specific Terraform workspaces (dev, staging, prod) with remote state management, enabling consistent, repeatable infrastructure across 3 environments for AT&T's enterprise applications.

Integrated Terraform and Ansible into Azure DevOps (ADO) pipelines, enabling fully automated end-to-end infrastructure and configuration deployment — eliminating manual handoffs between infra and app teams.

CI/CD & Configuration Management:

Engineered Azure DevOps YAML pipelines for 10+ application components across CRÈME and MDNCN applications, automating build, test, and deployment stages with quality gates. Developed Ansible playbooks for OS patching, user management, SSH key rotation, and compliance enforcement across 100+ Azure VMs - reducing configuration drift incidents to near zero.

Implemented blue-green deployment strategy for critical AT&T services, achieving zero-downtime releases.

Security & Secrets Management:

Integrated Azure Key Vault with Terraform and Ansible pipelines for dynamic secrets injection — eliminating hardcoded credentials across all deployment scripts and achieving zero secret exposure incidents.

Applied RBAC policies and network security group (NSG) rules across Azure resources, enforcing least-privilege access aligned with AT&T security standards. Configured Azure Monitor and Log Analytics workspaces for centralized logging and alerting across VM fleets, databases, and network traffic — reducing MTTR for infrastructure incidents by ~30%.

Built custom alert rules for CPU, memory, disk, and network anomalies, enabling proactive incident response before user impact.

Tools & Platform:

Azure Cloud, Azure DevOps, Terraform, Ansible, Azure Key Vault, Azure Monitor, Log Analytics, YAML Pipelines, PowerShell, Bash.

TECH PRIMO SOLUTIONS - DevOps Specialist

| March 2022 – Oct 2022

Client Project – FINONE Technologies (MUVIN e-Banking Application)

CI/CD Pipeline Engineering:

Designed and maintained end-to-end Jenkins CI/CD pipelines for MUVIN e-banking application, automating build, test, and deployment stages across Dev, QA, and Production environments - reducing manual deployment effort by ~50% and cutting release cycle time from days to hours. Implemented pipeline-level quality gates including automated unit test execution, code validation, and artifact versioning, improving deployment success rate to 95%+.

Containerization & Configuration Management:

Containerized MUVIN e-banking application components using Docker, eliminating environment inconsistency issues between Dev, QA, and Production — reducing environment-related deployment failures by ~60%.

Managed Kubernetes deployment manifests (YAML) for application workloads and services, optimizing pod resource allocation and ensuring high availability of banking-critical services.

Infrastructure & Security:

Provisioned and configured secure AWS cloud infrastructure (EC2, S3, VPC) based on architectural blueprints, supporting MUVIN e-banking application hosting requirements.

Configured and managed OpenVPN user authentication and access controls, securing remote connectivity for distributed development and operations teams.

Monitoring & Incident Management:

Implemented infrastructure monitoring and alerting using New Relic, configuring dashboards and threshold-based alerts for application performance, server health, and error rates - enabling proactive failure detection before user impact.

Maintained deployment runbooks and incident response documentation, reducing average incident resolution time by ~35%.

Tools & Platform:

Jenkins, Terraform, Ansible, Docker, Kubernetes, OpenVPN, New Relic, AWS (EC2, S3, VPC), Git, CI/CD Pipelines, Jira, Nexus, JFrog Artifactory, Linux

C360 SOFTWARE – AWS DevOps Engineer
Client Project – HITACHI (Rean Cloud Platform)

| July 2021 – Feb 2022

Worked as an AWS DevOps Engineer responsible for provisioning and managing cloud infrastructure for development, testing, and database teams. Automated deployments, backup operations, and high-availability configurations using various AWS and DevOps tools. Additionally, contributed to a cloud-native project for Provisioned AWS services and resources using Terraform, including EC2, EBS, S3, VPC, Subnets, ELB, Security Groups, Auto Scaling, and Route Tables. Created and maintained Jenkins CI/CD pipelines to automate infrastructure deployments, application releases, and repetitive operational tasks.

Managed EC2 Instances, ensured regular EBS volume backups and restoration processes, and stored Jenkins build artifacts and Docker images in AWS ECR and S3.

Configured Elastic Load Balancers (ELB) and Auto Scaling Groups to ensure high availability and load distribution for critical applications.

Supported developers and DBAs with tailored infrastructure environments to meet their planning and testing needs.

Tools & Platform:

AWS (EC2, S3, EBS, ELB, ASG, VPC, Route Tables), Terraform, Jenkins, Docker, AWS ECR, Ansible, Packer, Git, Linux

SNEHA ENTERPRISES - DevOps Engineer

| Sep 2020 – May 2021

Client Project– INFOWARE Solutions (Enterprise Web Application Support)

Worked as a Junior DevOps Engineer providing cloud-based infrastructure and build support to a globally distributed development and QA team. Played a key role in configuration, issue resolution, and deployment readiness of applications in test and pre-production environments.

Configured and managed cloud environments for application testing and release cycles, supporting QA and development teams.

Provided Level 1 and Level 2 technical support, resolving deployment and environment issues, including log analysis and restart/redeploy operations.

Developed lightweight automation scripts using Shell and Ansible to speed up environment provisioning for test and UAT pipelines. Assisted in migrating infrastructure configurations from manual setups to version-controlled templates using Terraform basics for EC2, S3, and VPC modules.

Tools & Platform:

AWS (EC2, S3, VPC), Jenkins, Git, Shell Scripting, Ansible, CloudWatch, Linux, Basic Terraform Modules, Nexus and Jfrog Artifactory

DIGITAL LYNC – Internship AWS & DevOps Engineer
Project – Java Web App Deployment & CI/CD Operations

| Jan 2020–June2020

As an intern, I contributed to automation and deployment tasks in a lab-based learning environment, focusing on building foundational DevOps and AWS cloud skills through real-time simulation projects.

Set up and maintained CI/CD pipelines using Jenkins, enabling automated builds, testing, and deployments in a learning environment.

Containerized Java web projects using Docker, building custom images and deploying containers for functional testing. Explored infrastructure management with AWS services such as EC2, S3, and IAM, focusing on deployment and basic security configurations. Learned and applied best practices for code integration and versioning, helping ensure stable testing of continuous code updates.

Tools & Platform:

AWS (EC2, S3, IAM), Jenkins, Git, Docker, Linux, Bash, Basic HTML/CSS for Web UI, GitHub, Java (WAR file deployment)
